LOGIN

Sign in

1 Open the application → Login screen appears

↓

2 Click Email address → Type your email

↓

3 Click Password → Type your password

→ **Click the eye icon**
Password becomes visible. Click it again to hide it.

↓

4 Click “Sign in to LMS”

↓

5 Your details are checked

→ **A field is empty**
“Please fill all the fields” appears. Fill the missing field and click Sign in again.

→ **Email or password is wrong**
“Invalid credentials” appears. Correct your details and click Sign in again.

↓

6 Correct details → Your dashboard opens

Cloud cost here
At Sign in: the cloud checks your account and saves the login session. Cost comes from the number of checks and the time the server runs.

LOGIN

Forgot password

1 On Login, click “Forgot password?”

↓

2 A “Reset password” window opens

→ **Click Cancel, X, or outside the window**
The window closes. You return to Login.

↓

3 Click Email address → Enter your registered email

↓

4 Click “Reset Password”

→ **Email field is empty**
An error appears. Enter your email and try again.

↓

5 A request is sent and an email is attempted

↓

6 A message appears → The window closes → Login is visible again

Cloud cost here
At Reset Password: the cloud records the request and sends an email. Charges depend on server usage and the email provider.

Current project note
Needs completion: the current email contains placeholder text. A working reset link, new-password screen and phone-based password recovery are not completed in this flow.

LOGIN

Verify an account / resend OTP

1. On Login, click “Verify account / resend OTP”
2. Enter the account email
3. Choose “New account activation” or “Account reactivation”
4. Click “Send OTP”
5. A six-digit code is sent to the registered phone → An OTP box appears

→ **Did not receive the code?**
Click Resend OTP. A new sending attempt is made.

6. Enter the six-digit code → Click “Verify account”

→ **Code is wrong or expired**
An error appears. Enter a valid code or request another one.

7. “Account verified. You can now sign in.” appears
8. Use the browser Back button to return to Login → Sign in

Cloud cost here
At Send / Resend OTP: notification-provider charges may apply. At Verify account: the saved account is checked and updated.

Current project note
This verifies account activation/reactivation. It is separate from resetting a forgotten password.

COMMON CONTROLS

Open another screen

1 Look at the menu on the left

→ **Menu is collapsed**

Click the chevron arrow to expand it. Click again to collapse it.

↓

2 Click a screen name, such as Trainees, Batch, or Volumes

↓

3 That screen opens

↓

4 Click the ANU logo or Dashboard to return to your dashboard

Cloud cost here

Changing the menu itself is local. Opening a screen may read saved cloud data.

Current project note

The visible menu depends on whether you are a trainee, instructor, institution admin or super admin.

COMMON CONTROLS

Notifications

1 Click the bell at the top

↓

2 The notification list opens

→ **Click Mark as read**
That notification becomes read.

→ **Click Mark all read**
All listed unread notifications become read.

→ **Click the bell again / outside the menu**
The notification menu closes.

↓

3 Click “View” beside a notification

↓

4 The related screen opens

Cloud cost here
Reading or updating saved notifications uses cloud data. It does not upload headset video.

COMMON CONTROLS

View profile / manage sessions / log out

1 Click your user menu at the top

→ **Click Sessions instead**

The device-session screen opens. See “Log out a device”.

→ **Click Logout instead**

Your current session ends. The Login screen opens.

↓

2 Click “Profile”

↓

3 Your saved profile appears

↓

4 Click Close / X to close the profile

Cloud cost here

Opening a profile may read saved cloud data. Logout updates your saved session.

COMMON CONTROLS

Fullscreen, table pages and search

1. Click the fullscreen icon → The browser enters fullscreen
2. Click it again → Normal view returns
3. In a table, click Next / Previous or a page number → Another page of rows appears
4. Change rows per page, where shown → More or fewer rows appear
5. Click Search → Type a name or term → Matching rows appear

Cloud cost here

Fullscreen is local. Table/search controls may work on already-loaded rows or request another set of cloud data, depending on the screen.

DASHBOARDS

Use your dashboard

1. Sign in → Your role-specific dashboard opens

↓

2. Admin: click Overview or Users → The selected panel appears

↓

3. Admin: click Trainees, Instructors or Batches → That list opens

↓

4. Super admin: click Institutions, Students, Instructors or Courses → That list opens

↓

5. Super admin: click Global Activity Tracking or Active Users → That panel appears

↓

6. Super admin: click Refresh Now → The latest activity is loaded

↓

7. Instructor: click Add Course → The custom-course screen opens

Cloud cost here
Dashboard data and refreshes read saved cloud information. Switching a panel may use information already loaded.

Current project note
These are separate role-specific choices. One person will not see all of them.

TRAINEES AND INSTRUCTORS

Add a trainee — personal details

1. Click “Trainees” in the left menu
2. Click “Add trainee”
3. The “Basic” step opens
4. Enter Full Name, Email address, Contact Number and Institution Name
5. Choose Date of Birth and Gender
6. Click Select Batch → Choose the trainee’s batch
7. Click Next → The “Credentials” step opens

Cloud cost here
The batch choices are read from saved data. Typing these details does not save the trainee yet.

TRAINEES AND INSTRUCTORS

Add a trainee — password, photo and save

1. In Credentials, enter Password and Confirm password
2. Choose Active or Inactive status
3. Click Next → “Profile & Meta Info” opens
4. Click “Upload File” → Choose a photograph
5. Click Submit
6. The account details and photograph are sent to the cloud
7. Success message appears → The trainee list opens

Need to change personal details?
Click Prev to return to Basic.

Need to change credentials?
Click Prev to return to Credentials.

Passwords do not match
An error appears. Return to Credentials and correct them.

Email already exists / required information is missing
An error appears. Correct the information before submitting again.

Cloud cost here
At Submit: account details are stored in the database; the photo is sent with the form. File storage and verification-message costs depend on the server path used.

TRAINEES AND INSTRUCTORS

Add an instructor

1. Click “Instructors”
2. Click “Add Instructor”
3. Enter personal details in Basic
4. Click Select Batches → Choose the instructor’s batches
5. Click Next → Enter password, confirmation and status

Need to go back?
Click Prev to return to the earlier step.

6. Click Next → Click Upload File → Choose photograph
7. Click Submit → On success, the instructor list opens

The form is rejected
Read the error, correct the details and submit again.

Cloud cost here
At Submit: cloud account creation, submitted photo handling and any verification message may incur usage.

TRAINEES AND INSTRUCTORS

View or edit a trainee

1 Click Trainees

↓

2 Find the trainee using Search or the table pages

→ **To edit instead**

Click Edit → Change the displayed fields / batch → Click Submit → On success, the list refreshes.

→ **Close the edit window without saving**

Click X or close the dialog. You return to the list.

↓

3 Click the trainee's name / View → Their dashboard opens

Cloud cost here

View reads saved results. Submit saves account changes in the cloud.

TRAINEES AND INSTRUCTORS

Enable, disable or delete a trainee

1 Open Trainees → Find the trainee

↓

2 Click Enable, Disable or Delete for that trainee

↓

3 A confirmation message appears

→ **Click Cancel**
The operation is cancelled. The account stays as it was.

↓

4 Click Okay to continue

→ **You selected Enable**
A verification OTP is sent. The trainee must verify the account to complete activation.

↓

5 The selected operation runs → The list is refreshed or a result is shown

→ **The request fails**
An error appears. Check the result before trying again.

Cloud cost here
At Okay: the saved account is updated or deleted. Enable may also send a paid verification message.

TRAINEES AND INSTRUCTORS

View, edit or delete an instructor

1 Click Instructors → Find the instructor

→ **See assigned batch names in the list**
Click the batch expander. Click it again to collapse the names.

→ **Edit the instructor**
Click Edit → Change the form → Click Submit → The list refreshes on success.

→ **Delete the instructor**
Click Delete → Click Okay in the confirmation. Click Cancel to keep the account.

↓

2 Click the instructor's name → Their profile opens

↓

3 Click a batch link → That batch profile opens

Cloud cost here
Viewing reads cloud information. Saving or confirming deletion changes saved account data.

BATCHES AND SCHEDULES

Create a batch

1. Click Batch
2. Select the Batch List tab
3. Click Create Batch
   - → **Decide not to create it**: Click X or outside the window.
4. Enter the batch name and dates
5. Select the curriculum → Then select the certificate
6. Click Save
   - → **Required details are missing / the batch already exists**: An error appears. Correct the form and click Save again.
7. On success, the window closes and the batch list refreshes

Cloud cost here

At Save: batch information is stored in the cloud. Curriculum and certificate choices also read saved data.

BATCHES AND SCHEDULES

Find, open, edit or delete a batch

1 Click Batch → Batch List

→ **Filter batches**

Click the filter icon → Choose at least one filter → Click Apply → Matching batches appear.

→ **Edit a batch**

Open its row menu → Click Edit → Change name / dates → Click Update.

→ **Cancel an edit**

Click Close.

→ **Delete a batch**

Open its row menu → Click Delete → Click Okay to delete or Cancel to keep it.

↓

2 Click a batch name → The batch profile opens

↓

3 Click Home → Dashboard opens

Cloud cost here

Opening/filtering reads cloud data. Update and confirmed deletion change saved batch data.

Current project note

Some sort icons in the batch profile have no sorting action connected.

BATCHES AND SCHEDULES

Create targeted learning

1. Click Batch → Click Targeted Learning
2. Click the create icon
3. Choose curriculum → Certificate → Learning modules
4. Choose resource type → Select resources
5. Complete the displayed learner and date selections
6. Click Initiate
7. On success, the window closes and the groups refresh

Cancel creation
Click X or outside the window.

Information is missing
An error appears. Complete the form and click Initiate again.

Cloud cost here
Choices read saved cloud data. Initiate stores the targeted learning assignment.

BATCHES AND SCHEDULES

Open or delete targeted learning

1 Click Batch → Targeted Learning

→

Delete a group

Open its row menu → Delete → Okay. Choose Cancel to keep it.

↓

2 Click the group name or View → Its profile opens

Cloud cost here

Opening reads saved group information. Confirmed deletion removes the saved assignment.

BATCHES AND SCHEDULES

Use the schedule

1. Click Schedules
2. Click Month or Week → The calendar view changes
3. Click Previous or Next → Another period appears
4. Click Today → The calendar returns to today
5. Click an event, or an item in Upcoming activity
6. The related batch profile opens

Cloud cost here

Loading schedules and opening the batch read saved cloud data. Moving the displayed calendar period is a view action.

COURSES AND LEARNING CONTENT

Create a curriculum

1. Super admin: click Curriculum
2. Click Create curriculum
3. Enter the curriculum details
4. Click Save curriculum
5. The saved curriculum appears when the list refreshes

→ **Cancel**
Click Close / X or outside the window.

→ **Saving fails**
Correct the information and try again.

Cloud cost here
At Save curriculum: the new curriculum is written to cloud data.

COURSES AND LEARNING CONTENT

Use a curriculum’s menu

1 Click Curriculum

↓

2 Open the Actions menu for a curriculum

→ **Click Tag trainees**
The Trainees list opens.

→ **Click Tag instructors**
The Instructors list opens.

→ **Click Delete**
A confirmation appears. Okay deletes it; Cancel keeps it.

↓

3 Click View or Add course → The Certifications list opens

Cloud cost here
Opening lists reads saved data. Confirming Delete changes cloud data.

COURSES AND LEARNING CONTENT

Create, open or delete a certification

1 Click Certifications

→ **Expand a list row**
Click its arrow / expandable label; click again to collapse it.

→ **Delete a certification**
Open the row menu → Delete → Okay. Choose Cancel to keep it.

→ **Tag a course**
Open the row menu → Tag Course → Choose associations → Save.

↓

2 Click Add Course

→ **Cancel creation**
Click X / outside the window.

↓

3 Enter the name and choose the curriculum

↓

4 Click Save

↓

5 The certification list refreshes

↓

6 Click a certification name or View → Its learning modules open

Cloud cost here
Save, Tag Course and confirmed Delete change saved cloud data. Opening a certification reads its content.

COURSES AND LEARNING CONTENT

Open modules, topics and resources

1 Open a certification

↓

2 Click the arrow beside a learning module

→ **Hide the module again**
Click the same arrow.

↓

3 The module's resource categories appear

↓

4 Click a category → Its resources appear

→ **Hide a category / topic**
Click its arrow again.

↓

5 If a topic is grouped, click its arrow → Its resources appear

↓

6 Click a resource row → A learner-completion window opens

→ **Return to the resources**
Click X or outside the completion window.

↓

7 Click View Profile beside a learner → Their dashboard opens

Cloud cost here
Opening content or learner-completion details reads saved cloud data. Expand / collapse actions themselves are local.

COURSES AND LEARNING CONTENT

Create a learning module

1. Open a certification
2. Click the add learning-module icon
3. Choose the certification and complete the course, module and unit fields
4. Click Create
5. On success, the new learning module is available in the refreshed view

Cancel
Click X / outside the window.

Creation fails
Correct the form and try again.

Cloud cost here
At Create: learning-module information is stored in the cloud.

COURSES AND LEARNING CONTENT

Create a resource

1. Open a certification → Expand its learning module
2. Click the add-resource icon
3. Choose the resource type
4. Complete the fields shown for that resource type
5. Click Create
6. On success, the resource list refreshes

→ **Cancel**
Click X / outside the window.

→ **Creation fails**
Correct the information and click Create again.

Cloud cost here
At Create: the resource details are stored in the cloud.

COURSES AND LEARNING CONTENT

Attach a volume to a resource

1 Open the certification → Expand the module and resource category

↓

2 Click Attach Volume beside the resource

→ **Cancel**
Click Cancel / X or outside the window.

↓

3 Select Volume Name

↓

4 The available Shadow Recording and Step Recording choices load

↓

5 Choose the applicable recordings

↓

6 Click Attach

→ **Attachment fails**
An error appears. Correct the selections and try again.

↓

7 On success, the window closes and the volume is linked to the resource

Cloud cost here
Selecting a volume reads recording information. Attach saves the link. It does not upload the whole volume again.

COURSES AND LEARNING CONTENT

Add or edit questions

1. Click the question-editor icon beside the resource

→ **Close the editor**
Click X / close the dialog.

↓

2. Choose the question type and enter its number / prompt

↓

3. Complete the fields shown for that question type

→ **Add an image**
Use the image file selector, where shown, or enter its image address.

↓

4. Click Add Option or Add Step to add a row

→ **Remove an option / step**
Click its remove icon.

↓

5. Enter the option / step details and choose the correct answer where applicable

↓

6. Click Add Question to add another question

→ **Remove a question**
Click that question's delete icon.

↓

7. Click Save Questions → The configured questions are saved

→ **Validation or saving fails**
Read the error, correct the fields and save again.

Cloud cost here
Save Questions stores question data. Uploading an image adds file-storage usage. Merely adding/removing an unsaved form row is local.

COURSES AND LEARNING CONTENT

Alternate Chapter → Module → Resource screens

1. On Chapters, click a chapter → Its modules appear
2. On Modules, click a module → Its resources appear
   - → **Edit resource questions**: Click the question icon beside the resource.
3. Click the add icon on the relevant screen
   - → **Cancel**: Click X / close.
4. Enter the chapter, module or resource details
5. Click Save → The corresponding creation request runs

Cloud cost here
Save stores the corresponding content record.

Current project note
The old Course breadcrumb points to an unregistered destination. The current source can send the user back to Login through that link.

COURSE ACCESS

Create and publish an accessible course

1 Open Content Access

↓

2 Click Create course

→ **Cancel creation**
Click the close control.

↓

3 Complete the course form → Click Create draft

↓

4 The new course appears as a draft

→ **Unpublish an existing course**
Click Unpublish. The course returns to draft.

→ **Archive an existing course**
Click Archive.

↓

5 Click Publish beside that course

↓

6 The course state changes and the list reloads

Cloud cost here
Create draft and changing the publication state update cloud data.

Current project note
Only users with the relevant permissions see these controls.

COURSE ACCESS

Choose who can see or use a course

1. Open Content Access → Find the course

→ **Open the course instead**
Click Open → Its certification details appear.

↓

2. Change its institution-visibility choices

↓

3. Click Save visibility → The institution access is saved

↓

4. Click Assignments → The assignment window opens

→ **Cancel assignments**
Click the close control.

↓

5. Choose the displayed batches / users

↓

6. Click Save assignments

↓

7. On success, the assignment window closes

Cloud cost here
Save visibility and Save assignments store access rules in the cloud.

COURSE ACCESS

Add administrators and review older content

1. Open the permitted administrator section in Content Access
2. To add an institution admin: choose the institution → Fill details → Click Add
3. To add a super admin: fill the super-admin form → Click Add Super Admin
4. Returned account information appears → Click Dismiss to hide it
5. For content awaiting review: choose Global core, Global specialized or Set institution
6. For an older mapping: click the applicable Migrate choice

Cloud cost here
Creating accounts and assigning ownership update cloud data. A verification message may add notification charges.

Current project note
These controls are restricted by role. Ownership/migration actions apply to existing content requiring review, not to an ordinary learner.

VOLUMES AND RECORDINGS

Upload a volume — enter details

1. Click Volumes
2. Click Upload Volume
3. Enter Volume Name and Anatomy Type
4. Choose Fetal Presentation and Trimester
5. Enter Gestational Age and Case Details
6. Check the displayed Uploader Name
7. Click the file-selection area → Your computer's file picker opens

→ **Cancel**
Click X / outside the upload window.

Cloud cost here
No volume file is sent merely by opening this window or typing metadata.

VOLUMES AND RECORDINGS

Upload a volume — choose files and send

1. In the file picker, choose the .vol file or files
2. The selected files appear in the upload window
3. Click Upload
4. The files are sent to cloud storage; their details are saved
5. A success / upload-result message appears
6. On success, the window closes and the volume list refreshes

Wrong file selected
Click Remove file beside it → Select the correct file.

Required details or files are missing
An error appears. Complete the form and click Upload again.

A file fails to upload
Inspect the upload result before retrying, so already-uploaded files are not blindly sent again.

Cloud cost here
At Upload: file capacity, upload requests and server processing are chargeable dimensions. Keeping the file in storage adds a monthly storage charge.

Current project note
The file picker allows up to ten .vol files. The backend also applies its configured file-size limit.

VOLUMES AND RECORDINGS

Filter, edit or convert a volume

1. Click Volumes
2. Type in Search or choose the anatomy / approval / conversion filters
3. Matching volume rows appear
4. Open the selected volume's row menu
5. Click Edit → Change details → Click Save Changes

→ **Cancel editing**
Click Cancel / X.

→ **Saving fails**
Read the error, correct the form and save again.

6. Or click the conversion action → "Conversion Started" appears if accepted

→ **Conversion request fails**
An error appears. Check the volume state before retrying.

Cloud cost here
Save Changes updates saved metadata. Starting conversion runs a cloud computer and creates a converted file, so compute time and new file storage are charged.

VOLUMES AND RECORDINGS

Download a volume or placement file

1. Click Volumes → Find the volume
2. Click Source file, Converted file or Download JSON file
3. Permission and file availability are checked

→ **File is unavailable / access is denied**
An error appears. The download does not complete.

4. The download starts from cloud storage
5. The file is saved by your browser

Cloud cost here
At download: file-read requests and data sent from the cloud may be billed. More downloads mean more delivered data.

VOLUMES AND RECORDINGS

Upload placement information

1. Click Volumes → Find the volume
2. Use that row's placement-JSON file selector
3. Choose the JSON file
4. The file extension and JSON contents are checked

→ **The file is not valid JSON**
An error appears. Choose a corrected JSON file.

5. If valid, the placement file is uploaded and linked to the volume

Cloud cost here
At upload: the placement file is stored in the cloud and its saved volume link is updated.

VOLUMES AND RECORDINGS

Download reference recordings

1. Click Volumes → Find the volume
2. Click Recording files
3. The recording-download window opens
4. Click the required recording, audio, image or Manifest file
5. The selected file downloads

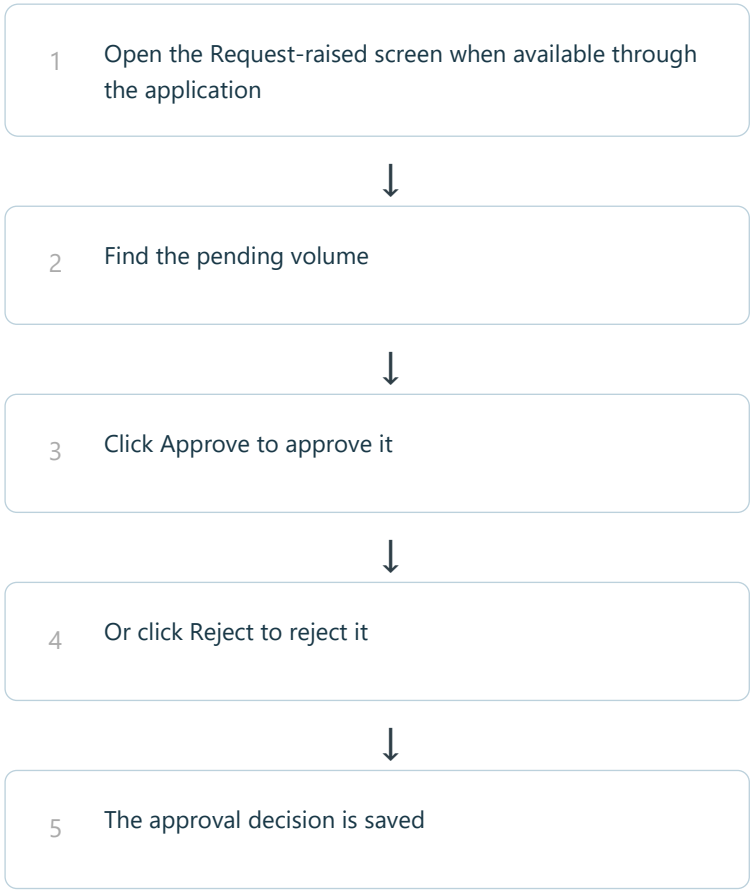

Return without downloading
Click X / outside the window.

File preparation fails
An error appears. Check file availability and retry.

Cloud cost here
Opening the list reads saved recording information. Each file download adds file requests and possible outbound-data charges.

VOLUMES AND RECORDINGS

Approve or reject an uploaded volume

Cloud cost here
Approve / Reject updates the saved approval status. It does not itself run conversion or transfer the full file.

VOLUMES AND RECORDINGS

Manage a cluster

1. Click Cluster
2. Type in Search clusters → Matching rows appear
3. Click Edit Cluster beside a row
4. Change the name, fetal presentation or selected volumes
5. Click Save Changes
6. The displayed cluster list / local saved copy updates

Delete a cluster

Click Delete Cluster → The deletion path runs and the displayed list updates.

Cancel editing

Click Cancel / X.

Cloud cost here

A successful cloud update uses database requests. The current page also has a local fallback, so a changed list does not always prove the cloud save succeeded.

Current project note

Add-cluster and recording-upload windows exist in the source, but their opening buttons are absent from the currently reviewed table/header. They should not be shown as available clicks.

VOLUMES AND RECORDINGS

Recording-upload window — if made accessible

1. Open the recording-upload window through a confirmed entry point

↓

2. Select the volume and enter the recording name

→ **Replace an existing recording instead**
Click Replace Existing Recording → Choose the existing recording → Choose replacement files → Click Replace Recording Files.

↓

3. Choose the recording JSON, audio, images and manifest files

→ **Cancel**
Click Cancel / X while no upload is running.

↓

4. Click Upload Recording

→ **Files are missing or rejected**
Read the error and correct the selected files.

↓

5. On success, the window closes and recording counts update

Cloud cost here
Upload / Replace sends file data to cloud storage and updates recording records.

Current project note
This is a defined window with an unconfirmed opening click, not a complete reachable user journey in the reviewed screen.

MAPPING AND REATTEMPTS

Create a course mapping

1. Super admin: click Course Mapping
2. Choose Volume → Trimester → Module → Unit → Course Type
3. Choose Shadow Recording and Step Recording where applicable
4. Click Create Mapping
5. On success, the form clears and the mappings reload

Start the form again
Click the form's Clear button.

A required choice is missing / saving fails
Read the error and correct the form.

Find existing mappings
Set list filters → Click Apply or Refresh. Click the filter Clear to reset them.

Cloud cost here
Create Mapping stores links between existing content. It does not resend the whole volume file.

MAPPING AND REATTEMPTS

Create a custom course

1 Instructor: click SVT Course, or click Add Course from the dashboard

→ **Return to dashboard**
Click Back.

↓

2 On the custom-course page, click Add Course

→ **Cancel**
Click X / outside the window.

↓

3 Enter course name, description and doctor name

→ **Start the form again**
Click Clear.

↓

4 Select volume and course type → Choose available reference recordings

↓

5 Click Create Course

→ **Required details or volume trimester are missing**
An error appears. Correct the form and retry.

↓

6 On success, the dialog closes

Cloud cost here
Create Course stores the course mapping and metadata; existing volume files are reused.

MAPPING AND REATTEMPTS

Set reattempt options

1. Super admin: click Reattempts
2. Choose Certificate → Course → Unit → Resource
3. Complete the displayed reattempt values
4. Click Save
5. The configuration is saved

Reset the form

Click Clear.

Find saved settings

Choose list filters → Apply or Refresh. Click Clear Filters to reset the list.

Cloud cost here

Save updates cloud configuration. Apply / Refresh reads existing configuration.

TRAINEE LEARNING

Choose what to view in My Learning

1. Trainee: click My Learning
2. Click a certification tab
3. Click the required module
   - → **The module is locked**
     The current module stays selected.
4. Choose an activity filter, or type in Search
5. Click a topic heading / arrow
   - → **Hide the topic**
     Click the topic heading / arrow again.
6. The topic's resources appear

Cloud cost here

The screen reads saved learning information. Most tab, filter and expand controls update the local view.

TRAINEE LEARNING

View questions, scores and attempt details

1. Open My Learning → Select the certification and module
2. Find the resource

→ **Image interpretation**
Click the interpretation resource row → Its interpretation details appear.

3. For MindSpark, click View Questions → Its configured questions appear
4. Click Close / X → Return to My Learning
5. Click Score to see the recorded attempts / scores
6. For supported practice or test resources, click View to see attempt details

→ **Open a submitted or reference image**
Click View submitted image, User image or Expert image where shown.

7. Inside the details, select a tab or expand an attempt to read more
8. Click Close / X / outside the window to return

Cloud cost here
Viewing attempts reads stored results. Opening an image can deliver a file from cloud storage, adding read / outbound-data usage.

Current project note

These controls display existing questions and results. They are not a web button to start the headset simulation.

TRAINEE LEARNING

View progress

1. Open My Progress if available through navigation / its saved link

↓

2. Click the required certification tab

↓

3. The displayed progress changes to that certification

Cloud cost here
Progress data is read from the cloud. Tab selection may reuse information already loaded.

Current project note
My Progress has a registered screen, but is not shown in the current trainee sidebar.

TRAINEE LEARNING

Send and manage a query

1. Click Queries
2. Click Create Query
3. Choose the query type and enter the query text
4. Click Submit
5. On success, the query list refreshes

→ **Cancel**
Click X / outside the dialog.

→ **Mark a query resolved, where permitted**
Open its row menu → Click Mark as Resolved.

→ **Delete a query, where permitted**
Open its row menu → Click Delete.

→ **Click View in the current query menu**
Only the menu closes; a query-detail screen is not opened by this handler.

Cloud cost here
Submit, Resolve and Delete change saved query information.

HEADSET AND LIVE VIEW

Watch your own headset stream

1. Sign in as a trainee
2. Click Streams
3. The page checks for your headset's published stream

→ **Headset is not publishing**
A waiting / unavailable message appears. Start publishing on the headset using its own controls.

4. If available, your live headset view appears
5. Click Enable audio / Mute audio to change preview sound
6. If Reconnect preview is shown, click it to retry the connection

Cloud cost here
While connected: live-video participant time is billed. India's first-tier video rate is $0.092 per connected participant-hour. The headset publisher and browser viewer each add connection time.

Current project note
The exact headset clicks to start publishing cannot be confirmed without the Unity/headset project.

HEADSET AND LIVE VIEW

Admin watches a trainee’s headset

1. Sign in as an institution admin
2. Click Streams
3. The institution’s live-stream page opens
4. Click the LIVE tile for the required trainee
5. That trainee’s live view is selected

Cloud cost here
While viewing: live participant time is billed. The trainee’s stream is also copied to the institution’s live stage; that usage must be included when calculating the full cloud bill.

Current project note
Live viewing does not automatically mean the video is saved as a recording.

HEADSET AND LIVE VIEW

Where headset files and results travel

1. Headset user selects an available learning activity — exact headset button needs confirmation
2. Headset asks the LMS for the authorized scenario
3. Cloud storage sends the required volume and reference files to the headset
4. The learner performs the activity in the headset
5. Headset sends the result and any submitted image to the LMS
6. The result is stored; submitted image files are stored where applicable
7. The LMS later reads those results for progress / attempt views

Cloud cost here
At download: file reads and delivered data. At submission: server/database usage and image storage. During live viewing: separate live-participant charges.

Current project note
This shows the data journey. The local project does not establish every screen or button inside the headset.

DEVICE SESSIONS

Log out a device

1. Click your user menu → Sessions
2. If permitted, search for a user and select them; otherwise view your own sessions
3. Find the active device session

→ **Log out every session instead**
Click Logout all sessions → Confirm OK. Click Cancel to keep them.

4. Click Logout beside that session
5. A browser confirmation appears → Click OK

→ **Click Cancel**
The session stays active.

6. The selected session ends and the list refreshes

→ **You ended your current session**
The Login screen opens.

Cloud cost here
Confirmation updates saved login sessions. A background session check also runs regularly while the app is open.

INSTITUTIONS AND REPORTS

Onboard a scan center

1. Super admin: click Academics
2. Click Onboard Scan Center
3. Enter the required scan-center information
4. Click Onboard Scan Center in the window
5. On success, a confirmation appears and the center list refreshes

Cancel
Click Cancel / X.

Information is missing / the request fails
An error appears. Correct the form and try again.

Cloud cost here
At Onboard: institution/account data is saved. Configured account notifications can add delivery costs.

INSTITUTIONS AND REPORTS

Filter or inspect scan-center actions

1 Click Academics

→ **Row menu → View Details**
Current action does not open a detail page.

→ **Row menu → Edit**
An edit window opens. Update currently lacks an active cloud-saving call.

→ **Row menu → Delete**
A confirmation appears. The current delete action lacks an active cloud-delete call.

↓

2 Click the filter icon

→ **Close the filter**
Click X / close.

↓

3 Choose the displayed filter values

↓

4 Click Apply → Matching loaded centers appear

↓

5 Click Clear to reset the filters

Cloud cost here
Filtering the already-loaded centers is local. The unfinished edit/delete controls do not establish a saved cloud change.

Current project note
A success message from the unfinished controls should not be treated as proof that a center was changed or deleted.

INSTITUTIONS AND REPORTS

Reports screen

1 Open Reports if available through a saved link / navigation

↓

2 Use the date controls that have active handlers

↓

3 The selected date values change

Cloud cost here
Opening reports may read saved information.

Current project note
Some visible report/filter buttons have no connected action. A working report-generation flow cannot be claimed from those buttons.
